

Thank you for investing your time in the Deliverr Infrastructure/Productivity Engineering role interview process at Deliverr.

The challenge: In a few lines create a very simple API in a language of your choice that returns a secret message. The message is very sensitive so you'll need to figure out how to best store it. We anticipate that we'll also need to store some data in a relation database in the future, so our application will also need access to RDS though setting up the connection in your application is extra credit.

Once your API is put together, write a Terraform script to provision and upload the API to be hosted in Elastic Beanstalk along with an RDS instance. We are looking for the use of best security practices in setting up both.

There is no set deadline for submission but we are actively interviewing and would like to move forward quickly.

If you have any questions about this challenge, please direct them to iana@deliverr.com

Deliverr, Inc. is committed to the full inclusion of all qualified individuals. As part of this commitment, Deliverr will ensure that persons with disabilities are provided reasonable accommodations. If reasonable accommodation is needed to perform this task please let me know so we can make the necessary arrangements.
